LANGUAGES

Catalan · native
Spanish · native
English

DESIGN

Experience design, inclusive design, interface and graphic design, wireflows, card sorting, expert review, prototyping, design systems.

CODE

Swift, SwiftUI, Python, Java, JavaScript, React, Firebase, Electron, MediaPipe, OpenCV, Git.

HARDWARE

Arduino, ESP32, MQTT, NFC, sensors and actuators, ADC, circuit analysis.

TOOLS

Figma, Illustrator, Maya, ZBrush, Premiere.

I build things for people I can name. A television that answers to a hand because someone I know cannot use a remote. A shopping list that lives on my family's fridge because nobody would install an app. A gym dashboard I drive with one finger because my hands are never free between sets. The engineering is how they get finished, not why they get started.

EDUCATION

Interactive Product Design and Creation

La Salle, Universitat Ramon Llull, Barcelona · first year complete, 60 ECTS

Experience design, inclusive design, interface and graphic design, programming and object orientation, electronics, and 3D, animation and story.

SELECTED WORK

Gesture TV ACCESSIBILITY · COMPUTER VISION

Replaces a television remote entirely for someone who cannot press its buttons: a clap wakes the TV, a hand in a screen zone opens an app, local voice covers the rest. No frame is ever written to disk.

Betsy IOS · PRODUCT RESEARCH

A private betting league for a group of friends, with virtual points and nothing convertible to money. Built on user tests, a mapped customer journey and defined target users, then written in SwiftUI on Firestore.

Reps PRODUCT · COMPUTER VISION

A gym dashboard driven by pointing at the camera and holding. Logs the set, runs the rest timer, controls Spotify and keeps a training log. Shipped as a Mac app so the camera opens on launch.

Jeffrey AI AGENT · SYSTEMS

A macOS assistant that acts instead of answering: it picks a route, calls a tool, runs it and replies in the language it was asked in, still working with the network down.

Haptic Hunter ACCESSIBILITY · HAPTICS

A game playable by blind, deaf and low vision players, where haptics, sound and visuals each carry the whole game rather than one carrying it and the rest decorating.

HOW I WORK

I finish things and then keep using them, which is where the real problems show up. A swipe gesture I built for Reps kept firing by accident; the fix was not tuning it but deleting it, because the finger doing the swiping was also the cursor and the two could never be told apart. Cutting a feature is a result.
