PROFILE

I turn interaction ideas into working products, from the first user flow to the code that makes it real. I study Design and Creation of Interactive Products at La Salle Barcelona and build my own products alongside the degree. My strongest work sits where UX decisions meet technical constraints: I prototype, test on real devices and change the design when the implementation shows a better answer.

SELECTED WORK

Jeffrey Desk

Personal product / product design + desktop development

Case study

A Mac workspace for a day split across apps and tabs, with an AI agent that can act on the pages and files you open. I moved the idea from a projected table to the Mac after finding that the software, not the projection, solved the problem, then turned my personal setup into something a stranger can install.

Where it stands A product edition with its own website, a four-step setup and up to 48 services, each kept to its own domain. An automated check walks the whole app and compares 86 screens on every plan.

Reps

Personal prototype / frontend + gesture interaction

Case study

A training screen for a garage gym, controlled by pointing at the camera so chalked hands never touch it. Every control confirms on a hold, with a ring that fills first, and works the same with a hand, a mouse or a touch screen. Testing showed a swipe and a quick cursor move were the same gesture, so I removed the swipe instead of adding thresholds.

Where it stands A working Mac app built with React, TypeScript and MediaPipe, with a published web version, used in my own sessions.

Betsy

Academic and personal project / UX research + iOS development

Case study

Private sports leagues for friends with virtual points, never real money, and one-on-one duels. I mapped the user journey and tested the first interface with the people it was for, then built it in SwiftUI and Firebase. Writing the database rules next to the screens showed that two phones could pay the same bet twice, so payouts moved into a transaction the rules guard.

Where it stands Runs on real fixtures and settles with real scores. Emulator tests confirm a bet settled again and again is paid exactly once.

Also in the portfolio: Gesture TV, which replaces a TV remote for someone who cannot use one. Nevera Bosch, a family shopping list opened by tapping an NFC tag, in daily use. Haptic Hunter, an iOS game played through vibration and sound.

EDUCATION

BSc in Design and Creation of Interactive Products

La Salle, Universitat Ramon Llull, Barcelona / second year, 2025 to 2029 (expected)

Focus: UX, frontend and interactive systems

TOOLS AND PRACTICE

Product
User research, user flows, interaction design, usability testing, Figma

Build
Swift and SwiftUI, React, TypeScript, HTML and CSS, Electron, Python, Git

Explore
Firebase, MediaPipe, Arduino and ESP32, AI-assisted prototyping checked on real devices

LANGUAGES

Catalan and Spanish: native / English: C1

Open to internships from June 2027, or through a university agreement, in product design, UX engineering and frontend. Barcelona, abroad or remote.
